Units 1 and 2 are CO<sub>2</sub> budget units because more than 50% of their annual heat input comes from the combustion of fossil fuels and they each serve a generator with a nameplate capacity equal to or greater than 25 megawatts (MW) electrical output. Units 1 and 2 also supply more than 10% of their gross electrical generation for transmission over the facilities of a transmission and distribution utility on an annual basis, so they are not currently eligible for this exemption opportunity.
